

EDUCATION

B.Sc. Software Engineering

Jan 2023 – Dec 2026

Laval University, Quebec City, QC

GPA: 3.82/4.33

Relevant Coursework: Data Structures and Algorithms, Software Quality Metrics, Software Architecture, Web Development, Human-Computer Interaction, Advanced Databases, Cryptography

SKILLS

Backend: Java, Python, C++, C, Spring Boot, Spring Kafka, REST, GraphQL, Flask**Frontend:** TypeScript, JavaScript, React, Vue, Angular, HTML, CSS**Data & Messaging:** Apache Kafka, SQL, PostgreSQL, MySQL, MongoDB, Cassandra (CQL), DuckDB**Cloud & DevOps:** Kubernetes, Docker, Helm, Rancher, AWS, GitLab CI/CD, Azure DevOps**Observability:** Dynatrace, Splunk, Prometheus, Grafana**Testing & Tools:** Claude Code, JUnit, Mockito, Cucumber, Postman, Bruno, Git, Jira**Languages Spoken:** Bilingual English–French

PROFESSIONAL EXPERIENCE

Software Developer Intern

May 2026 – Present

Ticketmaster

- Resolved a critical purchase processing incident by adding validation to reject scans for non-existent seats and verifying the fix with 97% test coverage
- Scaled the purchase pipeline's parallelism by growing Kafka partitions 5x and consumer replicas 4x
- Integrated a legacy ticketing system into the event-driven platform using Java, delivering 20+ stories across 15 repositories
- Used Claude Code daily to navigate, debug, and review code throughout the internship

Full Stack Developer Intern

Jan 2026 – Apr 2026

iA Financial Group

- Resolved JSON serialization and MongoDB persistence issues across Spring Boot microservices using Java, restoring traceability for insurance transactions
- Improved service resilience during MongoDB connection losses by configuring timeouts and connection pools, adding Kubernetes probes and implementing retry logic
- Migrated a Kafka consumer from Apache Camel to Spring Kafka, removing obsolete infrastructure configurations

Software Developer Intern

May 2025 – Aug 2025

Ticketmaster

- Enabled large-scale on-sale event processing by introducing pagination to the order pipeline
- Added GitLab CI coverage reporting and raised coverage from 28% to 89.41% via targeted unit tests, excluding an untestable 12,000-line class
- Blocked cancellations for events still on sale by validating event status before processing

Analyst Developer

May 2024 – Dec 2025

Retraite Québec

- Saved 75 hours monthly by automating email reports for 120 administrative units (Power Apps, Power Automate)
- Raised employee awareness of conflicts of interest by designing and shipping a company-wide self-assessment tool

ACTIVITIES

Ticketmaster Intern Pitch Competition | 1st Place

July 2026

- Won top pitch among summer 2026 interns by presenting an original idea to company leadership

Coveo Blitz | *Competitive Programming*

Jan 2025

- Built an autonomous racing bot in a 10-hour coding competition against 140 students, competing in real-time races against other teams' bots

PROJECTS

Campus Alarm Management System | *Java, REST API,DDD*

Academic project – Fall 2025

- Developed a REST API-driven alarm system for a campus that processed 5 security event types and triggered automated responses
- Designed a structured domain model and hexagonal architecture, integrating building mapping, door and ventilation control, notification services with a configurable persistence layer

NRO Electronics – Inventory Management System | *React, Express, MySQL*

Personal project

- Developed a full-stack inventory platform for a multi-location retailer with role-based access control
- Implemented the full stock lifecycle including inbound/outbound movement, inventory counts, sales with printable invoices, customer debt, bank deposits, and tontine tracking, with per-location dashboards and activity history
